

## **Families First Project Options 2025-2026**

\*The student can work on multiple projects if they wish.

### **Expanding Communication to Different Languages**

We have translated materials for our programs but are launching a project to provide communication with parents and on our website in these same languages. This project would involve researching options, determining a project plan, and support coordinating the implementation of the work. This would collaborate with the Senior Program Director and the Program Team to implement this.

### **Curriculum Development**

We are exploring providing our curricula for a new age range (ages 9-12). Currently, we have two curricula, one for parents of Birth - 3 and one for 3 - 8. This project would involve supporting the preliminary stages of this work which includes research, working the Senior Program Director to brainstorm and plan for the development of curriculum.

In addition, we're exploring amending our existing curriculum into shorter session opportunities for providers. This would involve reviewing, updating, and expanding on the curriculum to make these adjustments for these new sessions. In addition, it may involve supporting a pilot of this depending on the team's capacity.

### **Grant Research**

We may have the opportunity to support grant research to find additional funding opportunities for the organization.
